

**INFOTREND SHIPS ENHANCED VERSION
OF ITS PROPRIETARY STORAGE MANAGEMENT SOFTWARE SUITE
*SANWatch v1.2 Improves SAN Configuration and Management, Unburdens IT Managers***

Basingstoke, UK, 26th August 2008 – Networked storage expert Infotrend[®] (Public TPE: 2495) today announced it has released SANWatch[®] version 1.2, an upgrade to the company's proprietary storage management software suite designed for its EonStor[®] arrays. This new software version includes two brand new modules, Configuration Manager and Disk Performance Monitor, as well as enhancements to the Central Management Console. SANWatch provides an intelligent management interface that makes better use of existing storage resources and reduces the time storage managers need to spend managing their systems. As a result, productivity is increased while the cost and complexity typically associated with data growth are decreased.

- The new Configuration Manager feature is a very useful tool for managing multiple storage systems. IT managers can simultaneously export multiple storage configurations quickly and easily through a single console and discover, monitor, save, and restore multiple arrays through the comprehensive examples and scripts that are included. Upgrading firmware to all arrays is simple via easy-to-follow instructions, which will greatly save time and help prevent potential mistakes that can be caused by a complex configuration processes.

The Disk Performance Monitor module continually checks the performance of individual hard drives during active I/Os where a faulty drive can impact an array's overall performance. Upon reviewing the performance graphs, if there is any drive showing abnormal latency, the administrator can easily located and replace the faulty drive to restore and ensure optimum system performance.

- The enhanced Central Management function integrates subsystem information, such as disk status and storage capacity from multiply chosen RAID systems, into easy-to-view windows for straightforward management. This feature will help increase storage utilisation and IT efficiency.

“Managing storage is both a priority and a challenge for all companies today. With data volumes growing rapidly and compliance requirements increasing, overburdened IT departments feel the need for efficient storage management,” said Thomas Kao, director of global product planning and marketing at Infotrend Technology Inc. “SANWatch version 1.2 provides easy-to-use tools that streamline and standardise the often time-consuming process of SAN management and, in turn, protects our customers' investments in hardware and personnel.”

SANWatch 1.2 Highlights

- Complete centralised management
 - Automatically discovers and monitors all EonStor systems via an at-a-glance summary of storage status
 - Clearly displays the status of the shared-storage pool for better storage planning and utilisation
 - Easy multiple and single array monitoring and configuration

- Discover, monitor, save/restore, configure, and upgrade firmware via user-friendly tools to simplify management, save time, and reduce errors
- Disk Performance Monitor oversees each physical disk drive and helps administrators identify potential problems to help ensure consistently high performance
- Add-on data service features
 - Snapshot support for easy data protection
 - Other data services can be added based on customer need
- Notification Service automatically displays and sends notification of critical status changes and events for proactive administrative action
- EonPath® multi-pathing module provides path redundancy and load balancing

Availability

SANWatch version 1.2 is available now. All EonStor users can download the new software and firmware from Infotrend’s esupport system (customer service and support system). Snapshot functionality is also available for a free 30-day trial period.

About Infotrend

Infotrend, the networked storage expert, is a pioneer in cost-effective, high performance storage products. The company provides EonStor® storage subsystems and SANWatch® software for virtually all storage interfaces, including Fibre Channel, SAS, iSCSI, SCSI and SATA devices. For over a decade, Infotrend has provided reliable, fault-tolerant technology to prominent ODMs, distributors, and storage integrators worldwide. The company’s core competency includes performance optimised RAID ASICs, feature-rich firmware, and redundant, high availability RAID subsystems. Founded in 1993, Infotrend is traded on the Taiwan Stock Exchange (Taix), ticker number 2495. For more information, visit www.infotrend.com.
